U1, C4, & F1 are isolated haplotypes. They have no match to anyone else so far in the project. U1 is an unknown participant found in the Sorenson Database, with a genealogy that goes to Andrew Judson Sturtevant, which by RHS goes to Moses. This conflicts with the results of A5 a known descendant of Andrew.

TE/TI spelling of present day America and England. The A group are descendants of Samuel SturTEvant 1640 MA. They are through 3 different grandsons. B1 is a current resident of England who traces his line back to William & Elizabeth of early 1600 Norwell Woodhouse.

Descendants of John SturDIVant 1650 VA. This line also traces back to England in documentation. D1, D2, D3 are through 3 different grandsons. It is too early to tell whether the variation at DYS 462 in D3 is indicative of all descendants of Matthew.

E1 is a unique haploGroup, as well as haplotype to the project. Although he is R1a1, he has been put with this group because ancestor Richard 1804 VT is like Justus of the same area and time. Well known, except as to where they came from. There is an open offer on the table for a test of any male descendant of Justus.

← These are all descendants of William SturDevant of 1675 CT. They are all believed to be through grandson John Sturdevant II of Ridgefield, Danbury, Brookfield CT. C7's two, so far unique, variations indicate that this line is the only exception.

C5 is our Canadian DE spelling. While he is of the same Nordic population group as the other C group participants, the genetic distance is too great to be of any useful relation.
